

Argo AI VMS

APP Quick Start Guide

Step 1 Download and Install

App Store Google Play

Search for “Argo AI VMS” in your app store and download it to your mobile phone.

Tip: Before using the APP, make sure you have completed the ARGO Client and Config setup.

Step 1 Log in to start using the system

The image displays three sequential screenshots of the Argo AI VMS mobile application interface, illustrating the login and configuration process.

- First Screenshot (Login Screen):** Shows the login form with fields for Server Address, Username, and Password. A red box highlights the Server Address field, and a red arrow points to the second screenshot.
- Second Screenshot (Configuration Form):** Shows the configuration form with fields for Name, Address, Username, and Password. Red circles and arrows indicate the flow from the first screenshot.
- Third Screenshot (Recorder Configuration):** Shows the configuration page for the Recorder on LAPTOP-UFTC64RP. The 'EXTERNAL NETWORK SETTINGS' section includes 'Public ip address and port' with fields for External IP (116.168.1.1) and Port Forwarding (8080). The 'WEB SERVER SETTINGS' section includes 'Web Server' with an 'Enable' toggle and fields for HTTP Port (8080) and HTTPS Port (443). Red circles and arrows indicate the configuration steps.
